Vendor Solutions

A Total Solution: Content, Services & Technology

Via KnowledgeNet, Advanced Training combines the latest off-the-shelf content with comprehensive services and breakthrough technology to offer our customers a total solution that includes:

Off-the-shelf solutions

KnowledgeNet e-learning courses begin with licensed content and best-of-breed content from industry leaders like Cisco®, Microsoft®, Oracle®, EMC®, Sun technologies, CompTIA®, and American Management Association (AMA).

These strategic relationships allow KnowledgeNet to develop this content into the industry's most complete off-the-shelf course library, and ensure:

- **Effective coverage of multiple disciplines.** Complete access to mission-critical technical, business, and productivity skills libraries.
- **Immediate accessibility.** Access your courses anywhere via the Internet, in live, self-paced and mobile formats
- **A turn-key solution.** Programs ready for deployment to individuals and enterprises alike.
- **Authorised, vendor-approved content.** Strategic relationships ensure that we receive the most current information available, straight from the source. As a result, students receive only the latest modifications and version information and our customers experience the most effective e-learning available.

Different Paths, Same Destination

Though businesses and individual learners share the same common goal, successful knowledge transfer and retention, their needs and wants vary significantly. Fortunately, KnowledgeNet's multiple delivery methods offer a blended solution that satisfies both.

- **KnowledgeNet EXPRESS** courses are a concise, condensed version of our LIVE classes, perfect for independent, instructor-led study and effective as a refresher or if you miss a session.
- **KnowledgeNet INTERACTIVE** courses deliver self-paced, highly engaging Web-based training that is available anytime, anywhere.
- **KnowledgeNet MOBILE** courses deliver self-paced, full multimedia, interactive training via a Pocket PC for learners on-the-go.

e-learning

Learning Management System

KnowledgeNet's Learning Management System (LMS) enables organisations to effectively deliver, manage, and measure e-learning. Available in two versions, the Professional Edition and the Enterprise Edition, KnowledgeNet LMS delivers:

- **Flexible hosting environments.** KnowledgeNet offers a hosted LMS solution that can be immediately deployed globally. Or choose to purchase the complete application and host within your own enterprise.
- **Reduced cost of deployment.** Because KnowledgeNet's LMS can be a hosted system built upon the core technology of our enterprise-learning suite, Monsoon5, it is capable of being deployed globally in a fraction of the time typical of such an endeavor, dramatically reducing associated costs.
- **Powerful data analysis.** LMS administrators have access to over 50 different pre-configured reports, providing an unparalleled resource to filter, track, report, and present data on all levels. Custom reports can also be created to best demonstrate and present the value of the organisational e-learning investment.
- **Management of course access and assignment.** The LMS delivers an integrated system allowing all information relating to the requesting, approval, ordering, purchasing, and assigning of courses to be completed in one central location.
- **Corporate communication capabilities.** By leveraging the power of the KnowledgeNet LMS, managers are able to not only inform their learning community of training related news.

KnowledgeNet is committed to compliance with industry standards, from products that are designed to AICC guidelines, to our full support of the continuing development of SCORM. KnowledgeNet is also an active participant in other standards organisations including IMS, ADL, IEEE, and LRN 2.0. And with multiple successful implementations for numerous vendors in various environments, you can be sure that KnowledgeNet will offer the most options, and keep you a step ahead of industry standards.

Advanced Training has also a customised complete business solution, allowing your enterprise to achieve rapid knowledge transfer when it matters most, for your customers, your employees, or your partners, so you achieve bottom-line results with quality, interactive e-learning, including:

- **Solid Instructional Design.** Our advanced, multi-sensory instructional design approach to your content presentation includes professional voice-overs, 3-D animations, photo-realistic graphics, and text interwoven into your course content from the onset, acting as visual metaphors for complex concepts to make learning easier and more efficient.
- **Increased Accessibility.** Wherever you are, our customised company specific applications can provide the knowledge you need, when you need it. Engineered for accessibility, our custom training is a thin-client application designed to run efficiently on your intranet, or via CD-ROM.
- **Ease-of-Use.** Our training programs are delivered through a powerful, easy-to-use system with pop-up menus and sophisticated search capabilities that allow students to locate specific topics of interest.
- **Personalised Solutions.** Advanced Training designs custom training to meet your organisation's needs. We offer systematically designed, targeted products that are built to streamline performance.

Our comprehensive services allow Advanced Training to cater to our customers specific business needs. Whether you need a complete custom training program, consulting services, or implementation support, we offer complete solutions that combine you company specific content and our breakthrough technology to life.

Advanced Training is fully committed to open Sharable Content, and whenever possible applies the standards and guidelines as prescribed by LTSC (Learning Technology Standards Committee) and ADL (Advanced Distributed Learning initiative started by US White House in 1997 (parent of SCORM)).
