

RH318 Red Hat Virtualization

Introduction

Red Hat Virtualization (RH318) teaches experienced system administrators how to use the virtualization features of Red Hat® Enterprise Linux® managed through the Red Hat Virtualization suite.

Overview

Students acquire the skills and knowledge to effectively create, deploy, manage, and migrate Linux virtual machines hosted on either dedicated Red Hat Virtualization Hypervisor nodes or Red Hat Enterprise Linux servers using Red Hat Virtualization Manager. This course also helps candidates prepare for the Red Hat Virtualization Administrator exam (EX318), which, if passed, earns them the Red Hat Certified Virtualization Administrator (RHCVA) certification.

Outcomes

- Deploy Red Hat Virtualization.
- Configure Red Hat Virtualization environment (datacenters, clusters, and storage domains).
- Install, manage, and troubleshoot virtual machines (servers and desktops).
- Create virtual machine snapshots.
- Use templates for rapid virtual machine deployment.
- Secure Red Hat Virtualization environment with multilevel administrative roles.
- Monitor and create custom reports.
- Migrate virtual machines and explore high-availability options.

Audience

- Experienced Linux system administrators responsible for managing enterprise servers who are interested in learning how to manage large numbers of servers or virtual machines using Red Hat Virtualization
- IT professionals interested in earning a Red Hat Certified Virtualization Administrator (RHCVA) certification

Prerequisites

IT professionals who have earned a Red Hat Certified System Administrator (RHCSA) certification or maintain the equivalent experience with Linux.

Course Details

Course code: RH318

Duration: 4 days

Starting time: 9.00 am

Finishing time: 5.00 pm

Booking guidelines

Contact our Learning Consultants on 1300 86 87246 and we will assist you with your booking.

Course Outline

Overview of Red Hat Virtualization

Define and discuss general virtualization, Kernel-based Virtual Machine (KVM), and the concept of virtualization in Red Hat Virtualization.

Install, configure, and test manager

Install, configure, secure, and troubleshoot Red Hat Virtualization Manager.

Install and configure hypervisor hosts

Install, configure, upgrade, and troubleshoot Red Hat Virtualization Hypervisor.

Create datacenters and clusters

Create datacenters and clusters using Red Hat Virtualization Manager.

Create and maintaining storage

Create and administer data, iso, and export storage domains using Red Hat Virtualization.

Create logical networks

Create logical networks using Red Hat Virtualization Manager.

Deploy virtual machines

Install, deploy, and manage virtual machines (VMs) with appropriate drivers and agents using Red Hat Virtualization.

Manage VM snapshots and images

Manage VMs with snapshots and share images using Red Hat Virtualization.

Automate VM deployment

Utilize templates, pools, and cloud-init to automate deployment of VMs using Red Hat Virtualization.

Monitor and report Red Hat Virtualization

Locate information using the Red Hat Virtualization administration portal to generate reports of the environment.

Overview of advanced Red Hat Virtualization topics

Describe backing up and restoring Red Hat Virtualization, making Red Hat Virtualization highly available, and using the application programming interface (API).

Install and configure Red Hat Enterprise Linux host

Install and configure a Red Hat Enterprise Linux host.

Migrate VMs and configure high availability

Migrate VMs manually and automatically, and configure high availability with live migration using Red Hat Virtualization.
